# Oxalis regnellii

*Shamrock Plant*

This is one of the easiest flowering house plant to grow, often producing white or soft pink flowers continuously, except for a brief break in winter.

Oxalis is happy to grow in filtered sun indoors year-round, or can be moved outdoors to a shady spot in the summer.

Good light intensifies the leaf colors with strains of burgundy or variegated leaves.

**Light:** Bright to moderate year-round.

**Water:** Light, frequent waterings are needed to keep the plant constantly moist. Oxalis is sensitive to salt buildup so flushing the pots thoroughly with plenty of clean water, room-temperature every 2 months is helpful.

**Fertilizing:** Feed plants every 2 weeks with a balanced or high-phosphorous plant food.
